

2015 v 2020
WILDFIRES IN
CALIFORNIA

Telling a Narrative with Maps
Process Book
Brittany Rose
Quinnipiac University

1. IDEAS AND RESEARCH

Wild-Fires in California

Choropleth

- ~ zoomed into California showing all of the fires
- ~ how many deaths per fire

Symbol

- ~ severity - least damaging to most damaging

Locator

- ~ showing how close each fire is to the next in order by date
- ~ How long the fire lasted

Airplane travels during COVID

Choropleth

- ~ of the world showing each plane of where they are coming and going from.

Symbol

- ~ shortest to longest flight

Locator

- ~ showing each airport that is open

COVID cases in Colleges around the USA

Choropleth

- ~ of the USA showing all of the colleges with COVID cases

Symbol

- ~ severity least to greatest in number

Locator

- ~ showing the 5 top colleges with the most cases

Who: is your audience? Who are you sharing this information with?

- ◇ US Citizens

What: exactly are you trying to tell them?

- ◇ How bad the fires have been in California this year compared to 5 years ago
- ◇ Acres Burned
- ◇ How many deaths per fire (?).
- ◇ How long each fire lasted

Where: is the geographic focus? is it hyperlocal? national? global?

Does there need to be comparison between multiple for context?

- ◇ California, United States
- ◇ Yes, comparing 2015 wild-fires in California to 2020 wild-fires in California

When: is the timespan you are looking at? Is your story something that spans over time, or a specific date?

- ◇ 2015 and 2020

Why: do you feel people need to know this? what is the specific purpose?

- ◇ Bring awareness of how damaging wild-fires can be and also the difference in 5 years.

How: will you walk through a narrative? Think of the important features of a story: introduction, building action/details, climax (in this case it should be the exciting takeaway), and conclusion.

- ◇ *First* - I will have a blurb about wildfires in California and show the wildfires in 2015 and 2020 across CA.
- ◇ *Then* - I will show 2015 wild-fires showing acres burned, duration of the fire, and damage.
- ◇ *Then* - I will show 2020 wildfires showing acres burned, duration of the fire, and damage.
- ◇ *Then* - I will show a comparison on the same map both years in terms of where each fire was and highlight any overlapping areas.
- ◇ *Lastly* - I will show the total amount of acres burned from wild-fires in California in total (2015 and 2020).

2015 Incidents

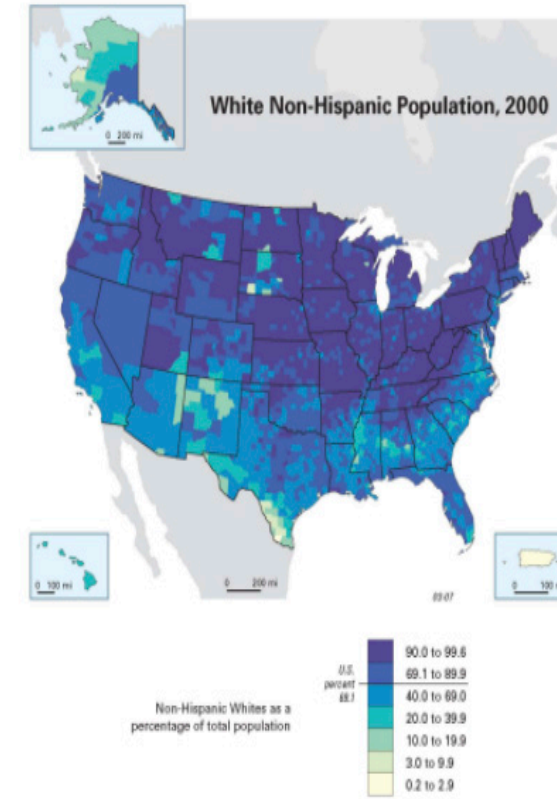

Name	Start Date	Counties	Acres	Containment
Round Fire	2/6/2015	Inyo and Mono	7,000	100%
Van Dyke Fire	2/6/2015	Mono	509	100%

California Wildfires 2015

Map: Brittany Rose · Source: [CAL FIRE](#) · Created with [Datawrapper](#)

California has had many wildfires over the years, but they are only getting worse. They are known to be extremely alarming and can do a lot of damage in small amounts of time. Wildfires are spontaneous and unexpected that can occur in rural and urban areas. In California they are known to damage structures and deplete acres and acres of land in a fast manner.

Duration of Wildfires in 2015

In Days

Map: Brittany Rose • Source: [CAL FIRE](#) • [Get the data](#) • Created with [Datawrapper](#)

Typically, the longer the fire takes to get to 100% containment the more acres burned. To put out each fire it ranged from less than 24 hours to a tad bit over three months. In 2020 the range was from less than 24 hours to a little less than three months. In some cases during both years there were fires that took longer to contain, but did not do as much damage as others. The longer the fire takes to put out, the more danger the residents of the community and fire personnels put themselves in. This can lead to evacuations, deaths and structural damages.

Damage to Structures from Wildfires in 2015

Structure Damage

Damage to Structures from Wildfires in 2015

Structure Damage

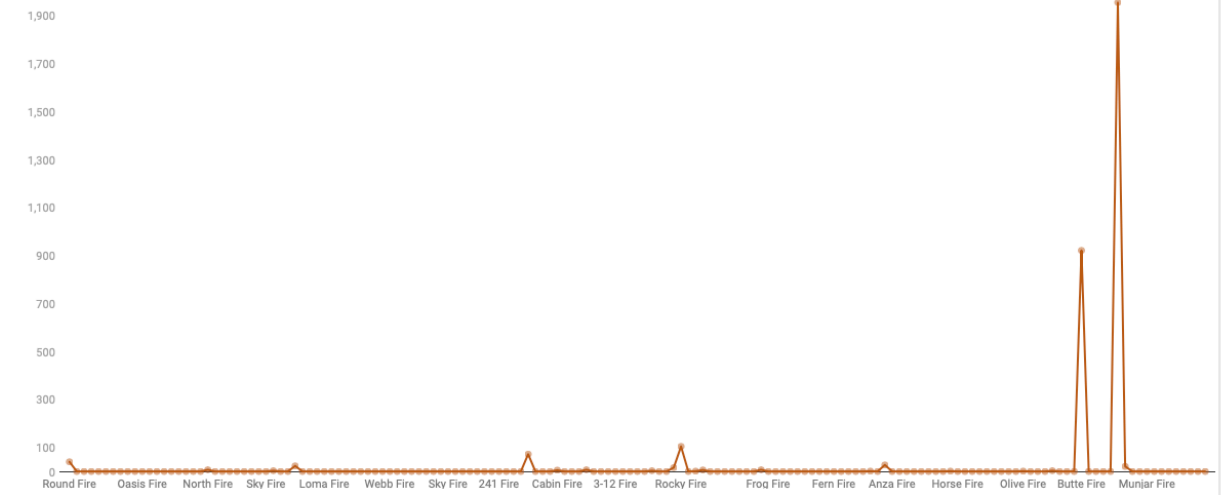

Chart: Brittany Rose • Source: [CAL FIRE](#) • [Get the data](#) • Created with [Datawrapper](#)

The number of structural damages in 2015 and 2020 due to wildfires are vastly different. As seen here, most of the damages to structures happened in the 2020 wildfires. In comparing how many acres were burned in 2015 and the structural damages that occurred it seems as though location is key. If the wildfire took place in a non-residential area the number of structural damages is lower than that of a wildfire coming into contact with a residential area.
